

Innovating solutions today
to meet tomorrow's challenges

W-Industries provides fully integrated technology and engineered solutions to the global energy industry.

Since 1984, W-Industries has been at the forefront of control and automation technology development, engineered packaging solutions and instrument and electrical installation. Our innovations have helped set the industry standards, developing solutions for some of the industries toughest challenges - our solutions enable the industry majors and independents alike to execute projects previously deemed unfeasible, while making them safer and more reliable. By designing integrated systems with operational assurance in mind, we have streamlined engineering, procurement, manufacturing, assembly, start up, installation, commissioning and life-cycle services for a more productive global energy future.

Continuity through Seamless Solutions

W-Industries is a premier, global engineering, procurement, manufacturing, development, construction and installation company. Our offerings span the entire value chain from concept to commissioning and beyond.

For more than three decades, W-Industries has provided the energy industry with automation and control, process design, and system packaging solutions that optimize production and ensure operational continuity.

Today, as the industry focuses on bigger challenges, increasing production while reducing costs, W-Industries understands the importance of continuity and the efficiencies in providing seamless offerings backed by a fully-integrated team.

We have expanded the breadth of our technical expertise and life-of-system service model by leveraging a history of success, advanced engineering, and a commitment to craftsmanship.

Maximizing Efficiencies

Our integrated approach streamlines processes, reduces risk, and aligns complementary technologies to simplify architecture and accelerate time to production.

Early FEED involvement means less time to design, more efficiencies on project teams. Redundancies are eliminated while phased project coordination is seamless as internal project teams can communicate real time, from design to manufacturing to assembly to installation.

Engineering Advantage

One quarter of W-Industries' team is made up of engineers that play a role in every step of our process. Our experienced mechanical, structural, electrical, software, control and instrumentation engineers are in constant communication with our project managers and installation and construction teams.

The communication between W-Industries' team members along the entire supply chain ensures every concept, design, system and installation solution is fully vetted and tested to produce the most efficient and optimal solution tailored to each individual project.

In-House Assurance

Not many companies can boast the ability to be a true single source solution provider. We pride ourselves on the fact that every concept and design is fabricated and comes to life in our global offices and combined manufacturing and fabrication spaces. This means that from the first phase of a project to final commissioning and handover, we have complete control with limited hand offs resulting in reduced risk to the project.

Tailored Technologies

No two systems are alike at W-Industries. Every solution that W-Industries develops is tailored for each individual project. We utilize our years of experience and knowledge in the field to produce reliable solutions that are then elevated and innovated according to the specs and requirements of each unique customer request.

At the heart of W-Industries is our team. We Invest in people to develop and empower a highly-competent workforce that brings immense passion, experience and knowledge to every project. We provide resources to ensure that proper training and advancement opportunities cultivate growth and innovation.

Our company's values and legacy guide our ability to add value through our products, solutions and services.

**Building on a legacy of innovation,
exceptional service and strong
relationships.**

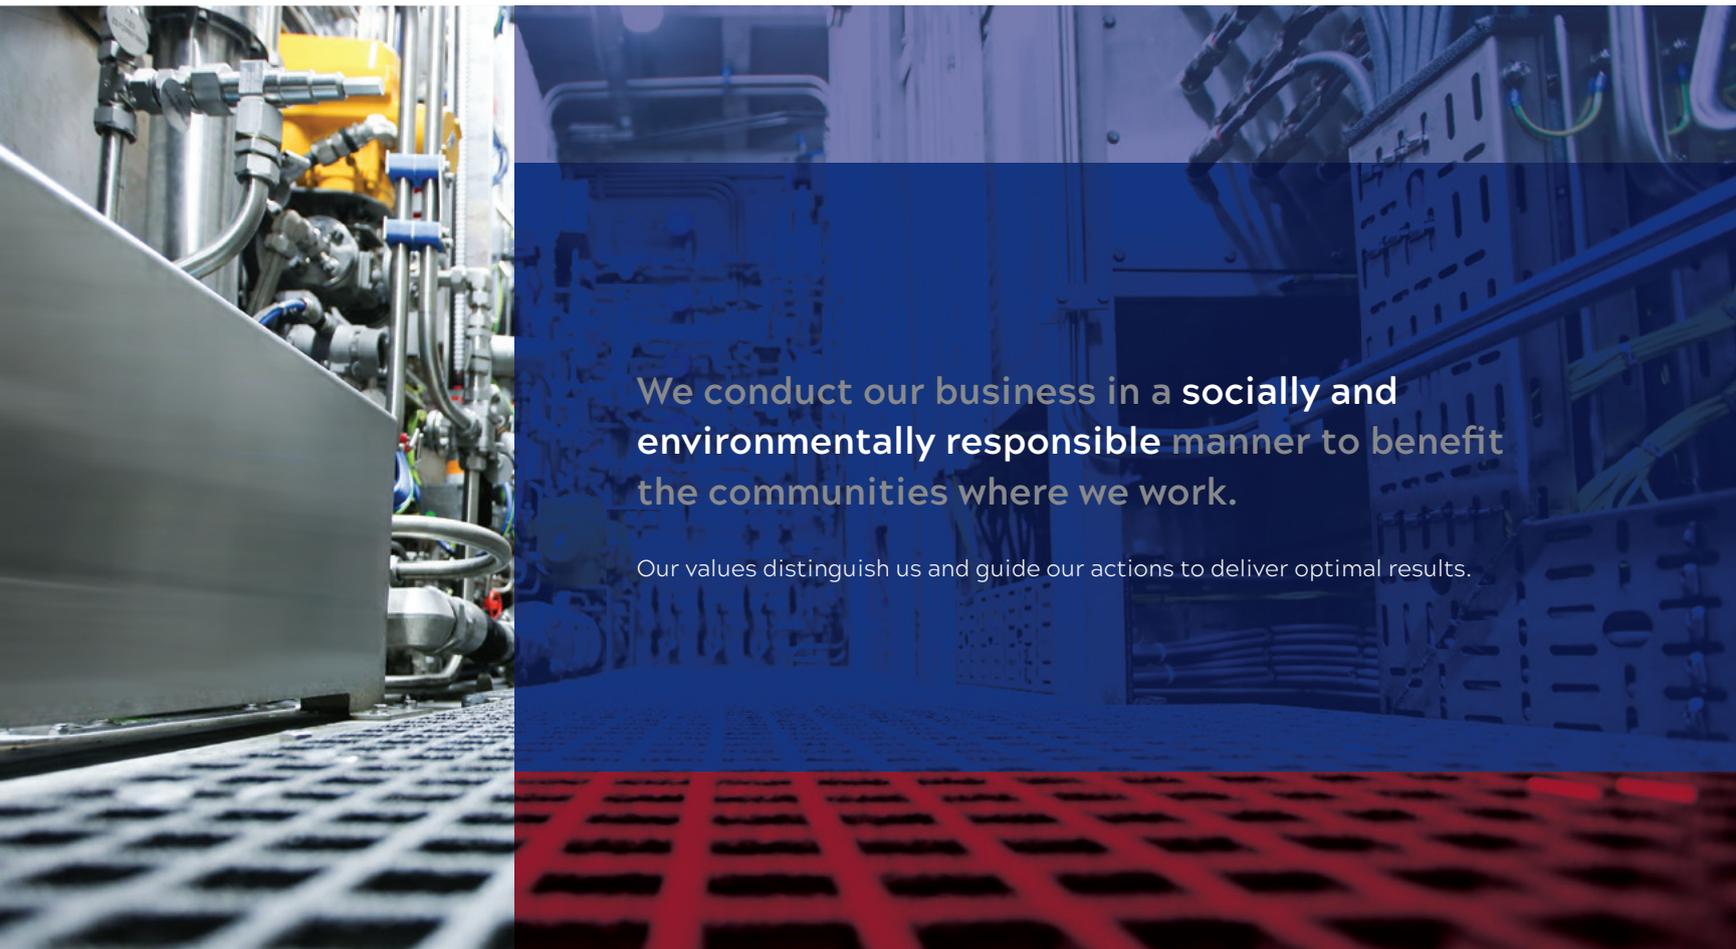

We place a strong emphasis on the continuous development of new services, capabilities and technologies to assist clients with meeting their rapidly evolving challenges.

Our Values

W-Industries' values are deeply embedded in our corporate culture. They represent what our company stands for, what our employees embody, and what our services and products contribute to the market. Our success is driven by our people and their commitment to operational excellence - achieving top performance in everyday practice.

Committed to Excellence

- **Health, Safety & Environment.** We are committed to an incident free workplace, reducing hazards, safeguarding equipment and protecting the people, communities and the environments in which we operate.
- **Quality.** We maintain a quality system that ensures adherence to industry best practices and compliance with all customer and regulatory requirements.
- **Innovation.** We push ourselves to continuously seek out cutting-edge solutions to the industries' biggest challenges.
- **Integrity & Trust.** We earn the trust of our customers, colleagues and partners by operating with the highest ethical standards in everything we do.
- **Training & Development.** We place great emphasis on providing access to training and continual development to ensure our team is the most capable in our field.
- **Collaboration.** We build meaningful and lasting relationships by collaborating with our communities, governments, customers, suppliers and other business partners.

We conduct our business in a socially and environmentally responsible manner to benefit the communities where we work.

Our values distinguish us and guide our actions to deliver optimal results.

From Concept to Delivery & Beyond

W-industries provides seamless servicing from concept to delivery. We have an extensive track record in delivering turnkey contracts that produce innovative, cost-effective and on-schedule projects with the highest Quality and HSE standards. We deliver complete solutions across project life cycles, from FEED to commissioning and start up, as well as continued service and maintenance programs.

W-Industries

Leading the Way in Design, Manufacture and Installation of Control, Automation & Engineered Packages

From new capital project builds to legacy system upgrades, W-Industries excels at providing innovative control and automation, process packages, and instrument and electrical installations that yield optimal operational performance. Our thirty-plus years of experience enables us to provide reliable and efficient solutions to meet even your most challenging project needs. Our commitment to continued innovation is a promise to help drive the industry forward, continuously responding to evolving client needs and developing groundbreaking technologies that become industry standard.

Our strict attention to detail along the entire supply chain paired with our expertise in system integration enables us to foresee and address design related issues that could arise during the execution stage of the project. We focus on seamless and cost-effective project design to maximize asset utilization.

Automation & Controls

From single unit controls to complete platform and plant control systems, W-Industries has implemented thousands of process control and industrial automation system configurations in the U.S. Gulf Coast and around the world.

Based on the unique details of each project, experienced oil and gas process and control systems engineers, design and develop functional specifications and execute on implementation and testing plans.

Our intimate knowledge of control system hardware and software allows us to offer a unique OT cybersecurity service to secure your assets and protect your ROI.

Engineered Packages

We specialize in custom designing and fabricating a variety of engineered packages for a broad range of applications in the energy industry.

From single pump installations to complete offshore modules, W-Industries supports each project with a level of expertise that only comes from experience and commitment to craftsmanship.

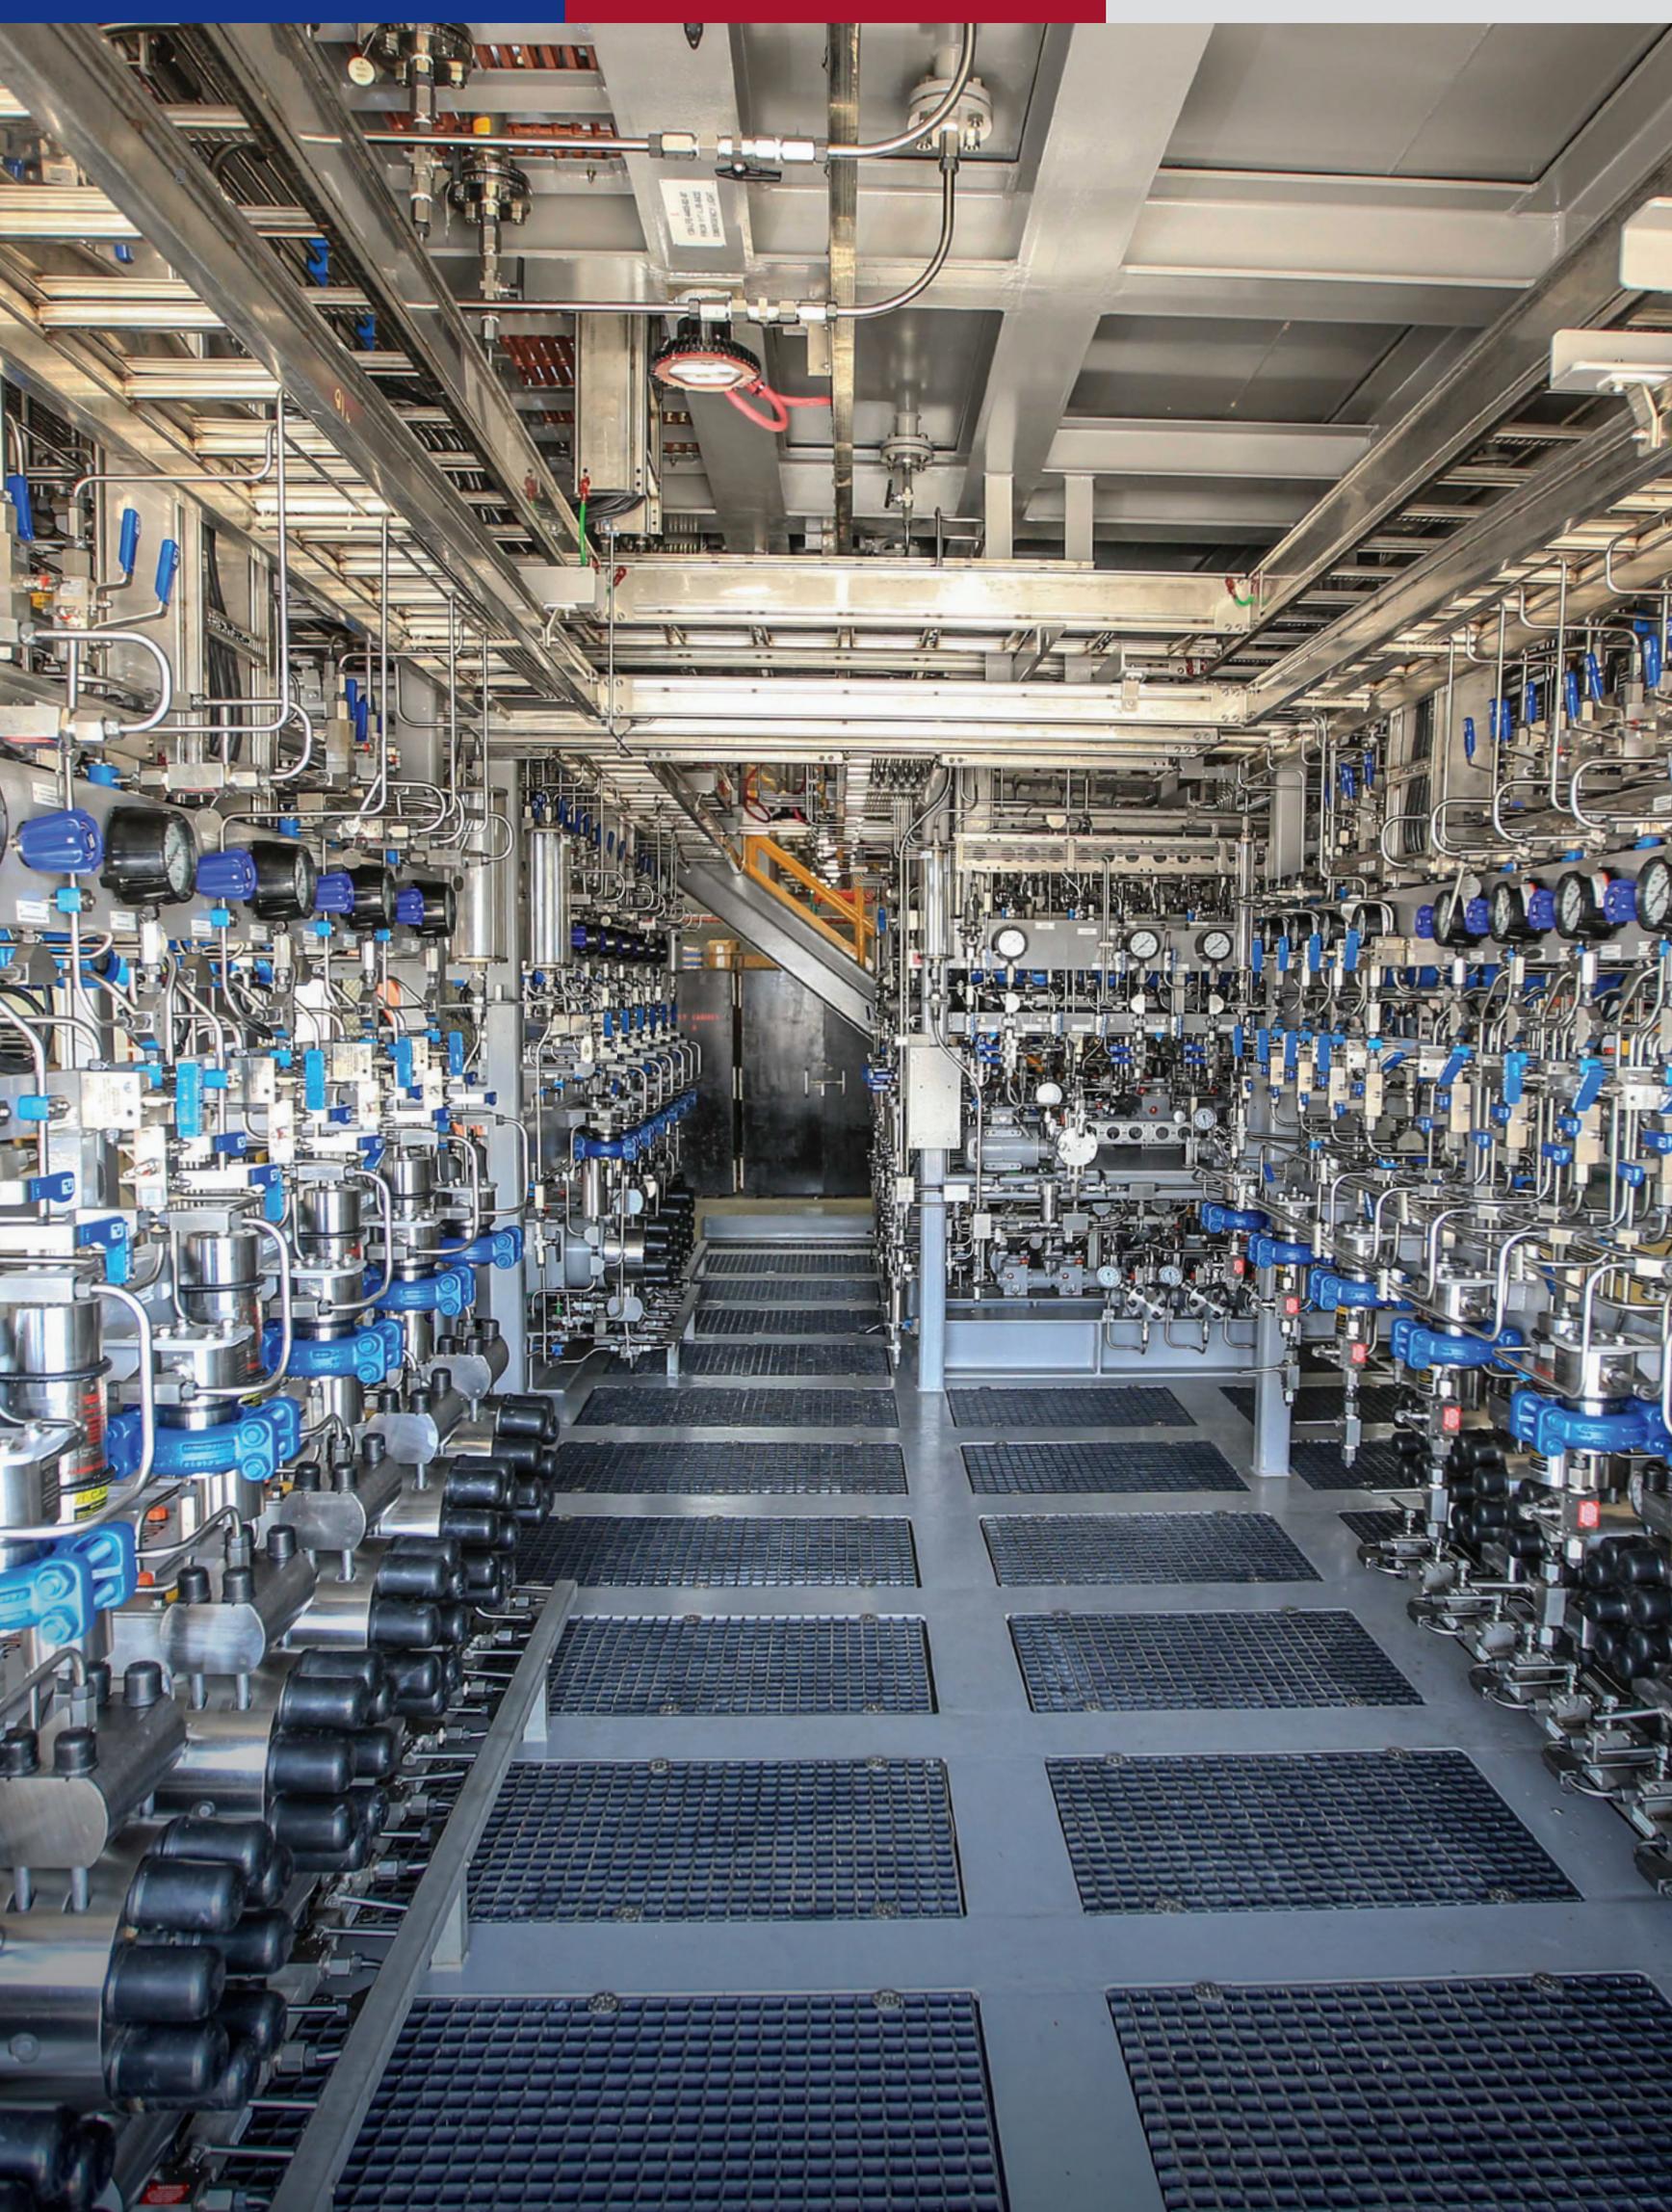

Our integrated approach includes FEED estimation, process design, mechanical design, detailed engineering, procurement, construction, fabrication, inspection and commissioning.

I&E Construction & Services

We offer the full range of I&E manufacturing and field services. From panel design and manufacture, to field installation and commissioning through startup and maintenance.

Through our Volta division we can customize low Voltage MCC to meet your requirements. Switchgear and MCC can be close coupled for an integrated LV system

W-Industries services a wide range of industries and maintains a pool of highly experienced electrical and instrument technicians to service any instrumentation and electrical need of our customers.
