

Design and Engineering

Our skilled engineers work closely with you to understand your unique specifications, ensuring that the design and engineering of your control panels meet your exact requirements. We leverage the latest technology and software to create efficient and reliable solutions.

Fabrication

Our state-of-the-art fabrication facility is equipped with cutting-edge machinery to produce high-quality control panels efficiently. Our skilled technicians meticulously assemble each component, adhering to the highest industry standards.

Testing and Quality Assurance

Before leaving our facility, every control panel undergoes thorough testing to validate its performance and safety. Our commitment to quality assurance guarantees that you receive a product that not only meets but exceeds your expectations.

Support

Our services extend beyond the fabrication process. Our team provides comprehensive support to ensure the seamless integration of your control panels into your operations. Additionally, we offer ongoing support and maintenance.

INNOVATING EFFICIENT SYSTEMS FOR A SUSTAINABLE FUTURE

Our focus on creating state-of-the-art, innovative systems for distribution empowers our customers to more efficiently consume resources, reducing their impact on the environment and the communities where they live and operate.

Value Added Relationships & Experience

Our strong relationships with manufacturers, in combination with our team's 40 years of intimate knowledge related to panel design, installation and support along the Gulf Coast, means GPCP delivers quality panels at a better value for our customers, no matter how simple or complex. As industry leaders, we take pride in delivering OEM agnostic top-tier services that enhance the efficiency and safety of your operations.

Bus Boxes

GPCP offers a variety of different designs to fit our customers' bus box needs. We can build aluminum or stainless steel bus boxes in single enclosures or custom made lengths with removable doors. Our team is available to recommend and design copper bus and insulator configurations or we can build them to customer specifications.

Switch Racks

Our team specializes in the fabrication of switch racks to meet customer specifications. GPCP is affiliated with all major industrial electronic manufacturers enabling us to provide any bill of material needed. We furnish approval drawings, material acquisitions, fabrication, and delivery. Switch racks are available to meet Hazardous location, Nema 3r. and Nema 4X requirements.

Control Panels

When designing industrial control panels, our team considers the specific requirements of the application, industry standards, and safety regulations to ensure optimal performance and reliability. Common types of industrial control panels we create include:

- Motor Control Centers (MCCs)
- PLC Control Panels
- Distribution Panels
- Process Control Panels
- Instrumentation Panels
- HMI (Human-Machine Interface) Panels
- Power Factor Correction Panels
- Variable Frequency Drive (VFD) Panels
- Pump Control Panels
- Heating, Ventilation, and Air Conditioning (HVAC) Control Panels
- Power Distribution Panels
- Custom Control Panels

All GPCP control panels undergo rigorous testing to ensure compliance with the strictest safety and performance standards set by Underwriters Laboratories (UL).

When you work with our panel shop team, you're investing in products that not only meet but exceed industry expectations, safeguarding your assets and personnel.
